                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     COMPUTER: IBM PC_compatible

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Beasley EM, Difrancesco V; Human cDNA encoding a novel kinase protein. Human; ss; gene; kinase; chromosome Location/Qualifiers 32. .1381 /*tag= a /product= "Kinase" ADC63369 standard; cDNA; 2571 BP. 22-OCT-2002; 2002US-00277032. 31-OCT-2001; 2001US-00984880. (first entry) (APPL-) APPLERA CORP Ketchum KA, US2003087294-A1 sapiens 18-DEC-2003 08-MAY-2003

WPI; 2003-765435/72. P-PSDB; ADC63370.

Novel isolated human kinase protein useful for drug screening assays, as a target for diagnosing disease, pharmacogenomic analysis, and for identifying compounds that modulate kinase activity.

Claim 22; SEQ ID NO 1; 48pp; English

The invention relates to an isolated peptide consisting of or comprising an amino acid sequence chosen from an amino acid sequence of human kinase protein (ADC63370), an allelic variant of the kinase, orthologue or fragment. Also included are an isolated antibody that selectively binds

indicate that normalize the first seek protective that competitive indicates that increase with kinase, pharmacogenomic analysis and treating a disorder characterised by an absence of inappropriate or unwanted expression of the protein, useful as target spot diagnosing active protein activity, disease or predisposition to disease. The nucleic acid is useful for assessing expression in disease states, diagnostic tools as an immunological marker for aberrant protein for inhibiting protein function, tissue typing. The nucleic acids are useful for facilitating protein trafficking or facilitate manipulation of a protein for assay or production, probes, primers, chemical intermediates, constructing recombinant vectors, expressing antiquency portions of the proteins, for determining chromosomal positions of the nucleic acid molecules, for making vectors containing the gene regulatory regions, as hybridisation probes for determining the presence, level, form and distribution of nucleic acid expression. The gene encoding the kinase is located on human chromosome 2. The present comprising the nucleic acids, a host cell containing the vector, detecting the presence of the kinase in a sample, detecting the presence of the mucleic acids in a sample, a pharmaceutical composition comprising a kinase binding agent, treating a disease or condition mediated by a human kinase protein and identifying a modulator of the expression of the kinase involves. The kinase is useful for identifying a modulator, for identifying an agent that binds to the kinase, for biological assays related to kinases, drug screening assays, identifying compounds that modulate kinase activity, to screen a compound for the ability to stimulate or inhibit interaction between the kinase protein and a stimulate or inhibit interaction between the kinase protein and a proteins detailed above (appearing as the cDNA, ADC63369, and gene, ADC63371), a gene chip comprising the nucleic acids, a transgenic non-human animal comprising the nucleic acids; a nucleic acid vector for competitive kinase, an isolated nucleic acid molecule encoding the kinase molecule that normally interacts with kinase protein,

Kinase of the thymidylate kinase subfamily. The human kinase polypeptides and nucleic acid molecules are useful as models for the development of human therapeutic targets, aid in the identification of therapeutic broad molecules are useful as models for the development of human therapeutic proteins, or serve as targets for the development of human therapeutic proteins, or serve as targets for the development of human therapeutic contents. That modulate kinase activity in cells and tissues that express the kinase proteins are also useful in raising antibodies or eliciting another immune response, as reagents in assays designed to contain thatistively determine levels of the protein in biological fluids, as markers for tissues in which the corresponding protein is preferentially expressed, or in screening a compound for the ability to stimulate or influit interacts with the kinase protein and a molecule that normally interacts with the kinase protein and a molecule that corresponding or anglesase or a predisposition to a disease mediated by the diagnosing a disease or a predisposition to a disease mediated by the associated with the absence of inappropriate, or unwanted expression of the protein or nucleic acid molecule. Or for treating a discorder content or nucleic acid molecule. The antibodies are useful for tissue typing, in isolating or detecting kinase proteins, or in pharmacogenomic analysis. This sequence encodes the novel human

The present invention provides human kinase polypeptides and the encoding polynucleotides. The invention is useful in the development of human therapeutic and diagnostic compositions, to identify therapeutic proteins and serve as targets for the development of human therapeutic agents that modulate kinase activity in cells and tissues, to elicit an immune response and for diagnosing and treating disorders characterised by the absence of inappropriate and unwanted expression of the protein. The

breast-specific proteins. The DNA and protein sequences of the invention are useful for the diagnosis, treatment and prevention of breast cancer. The present DNA sequence encodes a human breast-specific protein of the invention. Sequence 3060 BP; 731 A; 758 C; 757 G; 814 T; 0 U; 0 Other;	92.6%; Score 2380.6; DB 12; ty 99.4%; Pred. The invention feature to inverse displacements the voltage gated potassium channel, ion transport, Map3KB or thymidine kinase. Specifically, the invention describes inhibiting cell proliferation by modulating the function of oncology targets: H-Ras, WNT-7B and acetylglucosaminyltransferase. Small interfering RNA (siRNA) along with the antisense compounds specifically hybridise to the target nucleic acid molecules to inhibit gene expression. The WNL proteins are secreted ligands involved in embryogenesis and carcinogenesis, such that these antisense obligos are useful for treating breast, gastric and colon cancers. N-acetylglucosaminyltransferases are associated with tumour progression, cell migration and matrix invasion, while Map3KB regulates cancers the disorders responses, such that antisense inhibitors are cytostatic and antifinflammatory, and can be useful in cell offferential and modulates electrical excitability in neurons and can be useful in the treatment of cardiac arrhythmias and neurological disorders such as epilepsy. Thymidine kinase is important in DNA synthesis, and antisense compounds can treat cell proliferation and modulate the expression of interleukin B to inhibit their expression. This polymucleotide sequence interleukin B to inhibit expression. This polymucleotide sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    9;

```

 The invention relates to new isolated NovX polypeptides, the genes encoding them or sequences having at least 95% identity to the amino acid or nucleotide sequences. The NovX polypeptide is useful as a therapeutic, particularly in the manufacture of a medicament for treating a syndrome associated with a human disease, which includes a pathology associated with a human disease, which includes a pathology associated with novX polypeptide. The NoVX polypeptide is particularly useful for treating, preventing or alleviating pathology associated with NoVX to polypeptide in a mammal, e.g. a human. The NoVx nucleic acid and polypeptide are especially useful for treating or preventing e.g. diabetes, obesity, cancers (e.g. lymphona, uterus cancer or prostate cancer), dyslipidemias, anorexia, asting disorders, Alzheimer's disease, parkinson's disorder, canceria, ca

```
New NOVX polypeptides and polynucleotides, useful in gene therapy, particularly for treating or preventing a syndrome associated with a human disease e.g. diabetes, obesity, cancer, Alzheimer's disease,
                                                                                                                                                                                                                                                              (CURA-) CURAGEN CORP.

The invention relates to 566 new isolated human polypeptides and their encoding genes, sequences that are at least 954 identical to these or sequences comprising one or more conservative substitutions in these. The polypeptide, polymucleotide and antibodies against the polypeptides are useful in diagnosing, treating or preventing NoVX-associated disorders, e.g. cardiomyopathy, atheroselerosis, hypertension, cancer, obesity, diabetes, AIDS, multiple sclerosis, graft-versus-host disease.

Alzheimer's disease, parkinson's disease, asthma, or fertility disorders. The nucleic acids are further used as hybridization probes, in chromosome mapping, tissue typing, preventive medicine, and pharmacogenomics. The example of the nucleic acid sequence of the invention. nucleic acid molecules useful for preventing or New NOVX polypeptides and nucleic acid molecules useful for preventing of treating NOVX-associated disorders, e.g. cancer, cardiomyopathy, atherosclerosis or diabetes, in chromosome mapping, tissue typing or in Claim 20; SEQ ID NO 1111; 1503pp; English. pharmacogenomics.

Sequence 2856 BP; 700 A; 712 C; 692 G; 752 T; 0 U; 0 Other;

The invention relates to an oligonucleotide (antisense) 20-50 or 10-50 nucleotides in length that is targeted to regions of the cDNAs appearing as ABM10596-ABM10601 (human WAT-7B, N-acetyglucosaminyltransferase, oltered Kinase kinase kinase 8) or thymidine kinase. Also included are protein kinase kinase kinase 8) or thymidine kinase. Also included are methods of inhibiting the expression of WAT-7B, N-acetyglucosaminyltransferase, voltage-gated K channel, ion transport, acetyglucosaminyltransferase, voltage-gated K channel, ion transport, MapXR8 or thymidine kinase in a cell, comprising contacting the cell with the oligonucleotide cited above, a method of inhibiting cell comprising contacting a cell with the oligonucleotide contacting a cell with the oligonucleotide cited above). Also disclosed are antisense oligonucleotide cited above). Also disclosed are antisense oligonucleotide for H-ras and interleukin-8. The antisense oligonucleotide is useful in modulating the expression of WMT-7B, N-acetyglalocaminal parts and interleukin-8. The antisense
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   acetylglucosaminyltransferase, voltage-gated K channel, ion transport channel, map3K8 or thymidine kinase to treat diseases associated with their expression, such as cell proliferative disorders, infection or inflammation. In addition, the composition is used for disponstics, prophylaxis, or as research reagents or kits. The present sequence is cDNA from one of the ganes listed above, a target for the antisense oligonucleotides of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             tisense oligonucleotide for modulating expression of WNT-7B, N-3lucoaminyltzansferase, voltage-gated K channel, ion transport, or thymidine kinase, or for treating cancer, infection or

Human cDNA #720 differentially expressed in activated vascular tissue.

Human, gene, ss; vascular tissue, cytostatic, atherosclerosis, cardiant, hypotensive, antidiabetic, gynaecological, vasotropic; cerebroprotective, gene therapy, vascular disease, cancer, coronary, artery disease, hyportension, diabetes, pre-eclampsia, restenosis, ischaemia-reperfusion injury, stroke.

Combination for diagnosing, staging, treating, or monitoring the progression of treatment of a vascular disease, e.g. atherosclerosis, comprises several cDNAs that are differentially expressed in activated

This invention relates to a combination comprising several cDNAs that are differentially expressed in activated vascular tissue. The invention also discloses a high throughput method for detecting differentially expressed cDNAs in a sample. The CDNAs of the invention may have antiatteriosclerotic; cytostatic; cardiant; hypotensive; antidiabetic; gynaecological; vasotropic and cerebroprotective activities and may be used in gene therapy. The CDNAs of the invention may be used in a high-throughput methods for detecting differential expression of one or more CDNAs in a sample, or screening several molecules or compounds to identify a molecule or compound that specifically binds a cDNA of the invention. A protein encoded by the CDNA may be used to screen several molecules or compounds to identify a ligand that specifically binds to the protein, or to produce or purify an antibody to the protein that can be used to detect a protein in a sample or purify a natural or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               991
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           720
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   780
          diagnoshing, staging, treating, or monitoring the progression of treatment of a vascular disease, e.g. atherosclerosis, cancer, coronary artery disease, hypertension, diabetes, pre-eclampsia, ischaemia-reperfusion injury, restenosis, or stroke. The cDNAs can also be used for large-scale genetic or gene expression analysis of several new nucleic acid molecules. Antibodies to the proteins encoded by the cDNAs are useful for diagnosing pre-pathologic disorders, and chronic or acute diseases associated with abnormalities in the expression, amount or distribution of the protein. The present sequence represents a cDNA of the invention that is differentially expressed in activated vascular tissue. Note: The sequence data for this patent did not form part of the specification, but was obtained in electronic format directly from USPTO at http.seqdata.uspto.gov/sequence.html?DocID=20020137081
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          811
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      540
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 871

The invention relates to new isolated NOVX polypeptides, the genes encoding them or sequences having at least 95% identity to the amino acid or nucleotide sequences. The NOVX polypeptide is useful as a therapeutic, particularly in the manufacture of a medicament for treating a syndrome associated with a human disease, which includes a pathology associated with NOVX polypeptide. The NOVX polypeptide is particularly useful for treating, preventing or alleviating pathology associated with NOVX polypeptide in a mammal, e.g. a human. The NOVX nucleic acid and treating, preventing or alleviating pathology associated with NOVX polypeptide are especially useful for treating or preventing e.g. diabetes, obesity, cancers (e.g. lymphona, uterus cancer or prostate cancer), dyslipidemias, anorexia, wasting disorders, Alzheimer's disease, arkinson's disorder, canceria, cardiomyopathy, AlDS, asthma, Crohn's disease multiple sclerosis, hypertension, atherosclerosis, hemophilia, graft-versus-host disease or Albright hereditary osteodystrophy. The DNA conditions. These are also useful in developing powerful assay system for functional analysis of various human disorders, as well as in diagnostic applications. This sequence represents one of the NOVX genes of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Guo X, Fernandes ER, Smithson G, Stone DJ, Zerhusen BD;

ö New NOVX polypeptides and nucleic acid molecules useful for preventing treating NOVX-associated disorders, e.g. cancer, cardiomyopathy, atherosclerosis or diabetes, in chromosome mapping, tissue typing or in

1029 1149 1269 encoding genes, sequences that are at least significant to these or sequences comprising one or more conservative substitutions in these. The polypeptide, polynelectide and antibodies against the polypeptides are useful in diagnosing, treating or preventing NOVX-associated disorders, diabetes. AIDS, multiple sclerosis, hypertension, cancer, obesity, Alzhenmer's disease, asthma, or fertility disorders. The mucleic acids are further used as hybridization probes, in chromosome mapping, tissue typing, preventive medicine, and pharmacogenomics. The polypeptides are also useful as vaccines. This sequence represents an example of the nucleic acid sequence of the invention. 7; 1089 GCTGCTCACTGTGAGTCCTGAGGAGAGATTGCAGAGGCTGCAGGGCCGGGGCATGGAGAA 1209 1389 GCCAGGTGCCACGTCTAACTAGATTAGATGTTGTGAAACATCTACATCCACCATTGT 1449 479 729 599 119 789 606 696 359 419 539 179 849 239 629 719 779 invention relates to 566 new isolated human polypeptides and their 300 GATCTTTGATGATGAACCAACTATCATTAGAAGAGCTTTTTACTCTTTGGGGGAATTATAT CCTGGCTCACTTCGCCCTAGGCGCCCGTTTTGGAGGAGTGTACCTCCTTTATTCCTGAAGC CCGGGCAGTGCTTGACCTGGTCGACCAGTGCCCAAAACAGAAAGGAAAGGAAAGTTCCA 180 defirir de la controla del la controla del la controla del la controla del la controla de la controla del la controla del la controla del la controla del la controla del la controla del la controla del la controla del la controla del la controla del la controla del la con AGATTCACTTAAGGCTGTCCTCTTAAAGTCACCACCCTCTTGCATTGGCCAGTGGAGGAA 910 GATCTTTGATGAACCAACTATCATTAGAAGAGCTTTTTACTCTTTGGGCAATTATAT 970 TGTGGCCTCCGAAATAGCTAAAGAATCTGCCAAATCTCCTGTGATTGTAGACAGGTACTG 360 TGTGGCCTCCGAAATAGCTAAAGAATCTGCCAAATCTCCTGTGATTGTAGAACAGCTACTG 1030 GCACAGCACGCCACCTATGCCATAGCCACTGAGTGAGTGGGGGGTCTCCAGCACCTGCC 420 GCACAGGACGGCCACCTATGCCATAGCCACTGAGGTGAGTGGGGGTCTCCAGCACCTGCC CCCAGCCCATCACCTGTGTACCAGTGGCCAGAGGACCTGCTCAAACCTGACCTTATCCT GACCAGGGAAGAAGCAGAACTTGAGGCCAACAGTGTGTTTCGTCAAAAGGTAGAAATGTC CCCGGACCGGGAAGCCGCCCGGCCGTTTTGGAGGAGTGTACCTCCTTTATTCCTGAAGC 540 GCTGCTCACTGTGAGTCCTGAGGAGAGGTTGCAGAGGCTGCAGGGCCGGGCCATGGAGAA AGATTCACTTAAAGGCTGTCCTCTTAAAGTCACCACCCTCTTGCATTGGCCAGTGGAGGAA GACCAGGGAAGAAGCAGAACTTGAGGCCAACAGTGTGTTTCGTCAAAAGGTAGAAATGTC CTACCAGCGGATGGAGAATCCTGGCTGCCATGTGGTTGATGCCAGCCCCTCCAGAGAAAA GGTCCTGCAGACAGTATTAAGCCTAATCCAGAATAGTTTTAGTGAACCGTAGTTACTCTG 480 céchécécarchécérérérandeséchésésésésésérendenésérendesérentarien CTACCAGCGGATGGAGAATCCTGGCTGCCATGTGGTTGATGCCAGCCCTCCAGAGAAA GGTCCTGCAGACGGTATTAAGCCTAATCCAGAATAGTTTTAGTGAACCGTAGTTACTCTG Gaps DB 12; Length 2331; 7; Sequence 2331 BP; 646 A; 502 C; 497 G; 686 T; 0 U; 0 Other; Indels 22; Query Match 66.3%; Score 1704.8; Best Local Similarity 98.4%; Pred. This invention relates to novel nucleic acids encoding human PRO secreted and transmembrane proteins. Extracellular proteins play important roles in the formation, differentiation and maintenance of multicellular corganisms. The fate of many individual cells (for example proliferation, migration or differentiation) is typically governed by information received from other cells and the immediate environment. The information received from other cells and the immediate environment. The information of the transmitted by secreted polypeptides (for example mitogenic factors, survival factors, cytotoxic factors, differentiation factors, cautopeptides and hormones) which are received and interpreted by diverse cell receptors or membrane bound proteins. These membrane bound proteins and receptors may be of use as pharmaceutical and diagnostic agents, such are receptors may be of use as pharmaceutical and diagnostic agents, such as in the blocking of receptor-ligand interactions. The current invention corrections of the invention may have cytostatic activities through the stimulation of chondrocytes. The nucleic acids of the invention may be cuseful for the mannifacture of a medicament for diagnosing or treating at tumour in a mammal. In addition, they may be useful for measuring or detecting the expression of a tumour associated gene. The present

with cancerous state of prostate cancer, useful for detecting presence of prostate cancer, stage of prostate cancer Novel isolated nucleic acid molecule associated prostate cells and correlating with presence of

Claim 1; Page 5416-5417; 11750pp; English

The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the specification or its complement. (I) is useful for: (a) assessing whether a patient is afflicted with prostate cancer; (b) monitoring the progression of prostate cancer; (b) monitoring the factory of a test compound to inhibit prostate cancer in a patient; (d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (e) selecting a composition for inhibiting prostate cancer in a patient; (f) assessing the prostate call carcinogenic potential of a compound; (g) determining whether prostate cancer has metastasized in a patient; (h) determining whether prostate cancer has metastasized in a patient; (h) assessing the aggressiveness or indolence of prostate cancer in a patient; (I) is also useful as a pharmacodyanamic or pharmacogenomic marker

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the specification or its complament. (I) is useful for: (a) assessing whether patient is afflicted with prostate cancer; (b) monitoring the prostate cancer in a patient; (c) assessing the efficacy of a test compound to inhibit prostate cancer in a patient; (d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (e) selecting a composition for inhibiting prostate cancer in a patient; (f) assessing the prostate call carcinogenic potential of a compound; (g) assessing the prostate call carcinogenic potential of a compound; (g) determining whether prostate cancer has metastasized in a patient; (h) assessing the aggressiveness or indolence of prostate cancer in a patient; (i) is also useful as a pharmacodyanamic or pharmacogenomic marker
                                                                                                                                                                                                                                                                          cytostatic; carcinogen; pharmacodyanamic marker;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel isolated nucleic acid molecule associated with cancerous state of prostate cells and correlating with presence of prostate cancer, useful for detecting presence of prostate cancer.

MAPPING INFORMATION:
Mapping information for this clone was provided by Dr. John D.
McPherson, Department of Genetics, Washington University, St. Louis
MC. For additional information about the map position of this
sequence, see http://genome.wustl.edu/gsc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The clone sequenced to the left is RP11-445N10; the clone sequenced to the right is CTD-2016F17, 200 bp overlap. Actual start of this clone is at base position 1 of RP11-439M11; actual end is at base position 75906 of CTD-2016F17.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   from
                                                                                                                                                                                                                                                                                                                                                                        This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to respect all sequencing problems, such as compressions and repeats, all regions were covered by sequence from more than one subclone; and the assembly was confirmed by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The RECI-II human BAC library was made from the blood of one male donor, as described by Oseogawa, K., Woon, P.Y., Zhao, B., Frengen, E., Tateno, M., Catannese, J.J. and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from and coworkers at the Roswell Park Cancer Institute (http://bacpac.med.buffalo.edu)
                                                                                                                                                                                                                                        entire insert of this
                                                                                                                                                                                                                                     NOTICE: This sequence may not represent the entire insert of this colone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.
